

Intelligent Design

Have you ever looked up at the sky, felt the sun's warmth on your skin, and wondered how it all came to be? How everything around us is so beautifully designed and intricately connected? We believe that God's existence is evident in creation itself. As humans created in His image, we reflect a small piece of His greatness and purpose.

The human body is the most complex and unique creation on earth. From our organs' intricate workings to our brains' complexity, it's hard to deny that a powerful and intelligent creator designed us.

Psalms 139:14 (KJV): I will praise thee; for I am fearfully and wonderfully made: marvelous are thy works; and that my soul knoweth right well.

This scriptural verse declares God's awe-inspiring craftsmanship, reminding us of our divine origin and the extraordinary love the Almighty has for us. Each of us is a masterpiece uniquely designed by God, full of purpose and potential.

Wait, so you're saying you don't believe in God and don't think He created you? Then I'm curious: how do you think you came to be in this world?

"I'm the product of the combination of my parent's DNA, which results from millions of years of evolution."

Do you think smartphones evolved, or were they created by intelligent design? It's incredible to think that just a few decades ago, they were purely the stuff of science fiction. But now, we carry these powerful minicomputers in our pockets! A smartphone, a tiny piece of tech, can do so much. We can make phone calls, send messages, take photos, navigate globally, stream movies, and that's just the beginning! It's genuinely unique how far smartphone technology has come.

But as unique as a smartphone is, have you ever considered how it compares to your own body, specifically, your DNA? The DNA inside each of our cells is even more complex than the most advanced smartphone! If you stretch out the DNA in just one of your cells, it would be about 6 feet long. Imagine this: your body contains trillions of cells, each with its own DNA strand. If we connected all this DNA, it could stretch from the earth to the sun and back, not just once, but 600 times!

Humans are incredibly complex beings, surpassing any device we've ever made. The universe itself is even more intricate than our bodies. Yet, you want to believe the universe just popped into existence out of nowhere, unlike your smartphone,

which we know was made by intelligent design. It takes a lot more faith to believe in the randomness of evolution rather than in an all-knowing and all-powerful God who created us with a purpose and out of love.

Psalms 139:15-16 (KJV): My substance was not hidden from thee, when I was made in secret, and curiously wrought in the lowest parts of the earth. Thine eyes did see my substance, yet being imperfect; and in thy book, all my members were written, which in continuance were fashioned, when as yet there was none of them.

These verses beautifully illustrate how God knew us even before our conception; He had a divine blueprint for every part of us. As skilled artists or architects meticulously plan their creations, God conceived our unique characteristics and personalities. He lovingly planned every detail, every cell, every strand of DNA, making us the wonderfully complex and distinct individuals we are today. This divine craftsmanship reaffirms the undeniable existence of our Almighty Creator.

Atheism may seem like a logical belief system free from the constraints of religion. But upon closer examination, it requires just as much faith, if not more, to believe that God does not exist. The existence of a perfectly designed and complex universe, the intricate details of our bodies, and the undeniable longing for something more within ourselves all point toward a divine Creator.
